EXPERIENCE

TELUS Digital AI (Playment) — Nov 2024 – Present

Solutions Engineer (Applied AI Engineering)

- Designed and deployed a **FastAPI-based AI coding-problem evaluation service** on an existing **AWS EKS** cluster, checking submitted problems for validity, answer leakage, and duplicates before scheduling isolated **AWS Batch** evaluation jobs.
- Integrated **Claude Code** with **Harbour** sandbox environments to execute **five independent solver runs**, graded using evaluation rubrics, and a **sixth judge-only run** assessing the human-submitted solution without a solver; reported **pass@5**, pass/fail outcomes, and 0–10 rubric scores.
- Built an end-to-end **GenAI data processing pipeline** for **40K+ hours** of conversational audio, combining Python/OpenAI SDK metadata extraction, **PGVector** retrieval, and GCP BigQuery/Cloud Storage; deployed containerized workers with **PostgreSQL advisory locks** to coordinate processing and reduce duplicate work.
- Developed reusable Python/FastAPI ingestion integrations using REST APIs and Bright Data proxy infrastructure to acquire and structure data for AI workflows.

Tredence Inc. — Jun 2023 – Nov 2024

Software Engineer

- Developed production data pipelines using **PySpark, Azure Databricks, Azure Data Factory, and HDFS**, including cluster provisioning through APIs, job scheduling, and performance tuning.
- Built cloud data integration infrastructure using **Terraform and Azure DevOps**, supporting version-controlled deployments and reusable infrastructure components.
- Contributed to an internal data quality monitoring tool, implementing reusable validation and monitoring components for data pipelines.

Samsung SDS — Mar 2023 – Jun 2023

SDE Intern

- Developed full-stack features using **React (TypeScript), Java Spring Boot, and MySQL**, including REST API integration, reusable UI components, unit tests, and technical documentation.

PROJECTS

Micrograd – Neural Network from Scratch | *Python, NumPy*

- Implemented a scalar autograd engine with reverse-mode automatic differentiation and trained an MLP on MNIST to explore backpropagation and neural-network internals.

Game Playing AIs | *Python*

- Implemented decision-making algorithms including Minimax, A* search, Q-learning, and backtracking across multiple game environments.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, C/C++, Java
Applied AI / LLMs: Claude Code, OpenAI SDK, LLM evaluation, rubric-based grading, agentic workflows, RAG, vector search, prompt engineering
Backend / APIs: FastAPI, Flask, REST APIs, React, Spring Boot
Cloud / Infrastructure: AWS (EKS, Batch), GCP, Azure, Docker, Kubernetes, Terraform, CI/CD, Git
Data / Databases: PostgreSQL, PGVector, MySQL, MongoDB, PySpark, Databricks, BigQuery, Pandas, NumPy
ML / Tools: PyTorch, scikit-learn, MLflow, OpenCV, ffmpeg

EDUCATION

Thapar Institute of Engineering & Technology — Jun 2019 – Jun 2023

B.E. Computer Engineering | CGPA: 8.29/10 — *Patiala, India*

Relevant cybersecurity coursework: Secure Coding, Computer & Network Security, Blockchain Technology; hands-on Linux security labs covering buffer overflows and SQL injection.
